EXPLORATION DRILLING AT PERKOA COMPLETED

AIM Resources Limited (“*AIM Resources*”) wish to advise that the exploration drilling programme surrounding the Perkoa Mine was finalised for a total of 9 drillholes totalling 2,402m, from a proposal to drill out 6 EM anomalies.

Progress was impeded on two anomalies by the continuation of seasonal rainfall, which was prolonged by an unusually late start for the season. These outstanding anomalies are currently inaccessible due to water levels over creek crossings, and drilling will be suspended until a later date.

Observation of drill chips and core identified pyrite and pyrrhotite in some holes that were targeting coincident geophysical and geochemical anomalies. Onsite personnel will take composite samples based on lithological and mineralogical intervals for further geochemical analysis. Samples collected will be sent to SGS Laboratories in Ouagadougou for geochemical analysis for zinc, copper, lead and gold.

AIM Resources are considering supplementary geophysical surveys to further investigate the likely cause of the anomalies, and determine if subsequent drillholes may be required.
